DATA MANAGEMENT PLAN

Template sheet for each dataset

Partner name	IFREMER
Data category	Genome (host)
Concerned WP	WP3 Choisissez un élément. Choisissez un élément.
Name of the VIVALDI referent(s)	Genome (Oyster): JB Lamy
Reference of the dataset Please refer to the DMP table to find the appropriate reference. <small>Ex: Genome-Patho/SubTaskN*/Pathogen/Partner N*</small>	Genome-Host/WP3.1.1/Crassostrea_gigas/Ifremer
Description of the data	Whole genome sequencing of grands-parents, parents, and 5 offsprings per F2 families produced at Ifremer La Tremblade (France) (65 individuals).
Type	Sequences
Period and frequency of data collection	N/A
Geographical site of data collection (if applicable)	N/A
Description of the material from which the dataset is generated Information will be obtained from individuals, which can come from natural/hatchery population and/or from family produced in hatchery. Animals can be infected (naturally or experimentally). DNA extraction can be done from the whole animal,	Grands-parents were from highly resistant versus highly sensible families. We add a pedigree files to describe individuals relatedness

<p>tissue.</p> <p>Protocols <i>Example: 16S ribosomal RNA gene sequencing by NGS</i> Please refer to the DMP table* for more examples</p>	<p>Nucleic acid extraction was performed using the QIAamp DNA Mini Kit (Qiagen) according to the manufacturer's handbook. <i>All the samples have been prepared using the Illumina TruSeq PCR free protocol on a HiSeq 4000 paired-end 150x2 with 350 insert size.</i></p>
<p>Nature of the collected/generated data <i>Example: Raw dataset in .blc/.fastq/.fasta formats for genomic information, and processed data set will be .vcf/.bed formats.</i> Please refer to the DMP table* for more examples</p>	<p>.fastq.gz <i>We will add finale files as soon they available.</i></p>
<p>Coverage (if applicable) <i>Example: random genomic regions covered at 50 X</i> Please refer to the DMP table* for more examples</p>	<p><i>Grands-parents and parents have been sequenced at 15 X and offsprings have sequenced at 15 X.</i></p>
<p>What are the prerequisites allowing to use the data as such? <i>Example: Any person able to use .fastq file and .fasta file</i> Please refer to the DMP table* for more examples</p>	<p><i>After publication anybody that could process fastq.gz files.</i></p>
<p>Sharing of main data</p>	<p><i>Saved and shared after publication</i> <i>Please specify</i></p>
<p>Archiving and preservation <i>Example: data will be stored on a hard drive + online back up and then will be released on public database (Sinoe, Dryad)</i></p>	<p><i>The dataset will be stored on datarmor in the dataref disk:</i> /dataref/ref2/intranet/ifremer/sq2m/vivaldi/data/dna-sequence-raw/ <i>The dataset will be public (ftp servor) after publication. It will be also referenced in Sinoe/SISMER/SEXTANT catalogue.</i> https://sextant.ifremer.fr/fr/geoservices/catalogue</p>

after publication.
Please refer to the DMP table* for more examples

List, description and storage of associated data (metadata)
Examples: environmental data, mortality monitoring, genotyping...

[Individuals relatedness is described in the associated pedigree file and phenotype file DISKII G:\IFREMER\02-PROJETS\H2020\Tackling disease\08 QTL detection VIVALDI\03 sampling design\01 input](#)
[Individuals relatedness is described in the associated pedigree file](#) See attached pedigree files

Sharing of metadata (if relevant)
