

Vivaldi Project

Data management plan

Microbiome (bivalve)

Key words: Crassostrea gigas, DNA, Bacterial diversity, vibriome

DATA MANAGEMENT PLAN

Template sheet for each dataset

Partner name	CNRS
Data category	Microbiome (bivalve)
Concerned WP	WP1 WP4 Choisissez un élément.
Name of the VIVALDI referent(s)	Microbiome: Alberto Pallavicini
Reference of the dataset <i>Please refer to the DMP table to find the appropriate reference.</i> <i>Ex: Genome-Patho/SubTaskN°/Pathogen/PartnerN°</i>	Microbiome-bivalve/SubTaskN°1.2.1/Oyster/PartnerN°2-11-13
	16S sequencing from contrasting animals
Description of the data	
Type	Sequences
Period and frequency of data collection	Samples has been collected the 10 th July (mortalities) and 5 th October 2017
Geographical site of data collection (if applicable)	Samples have been collected in Bay of Brest France
Description of the material from which the dataset is generated <i>Information will be obtained from individuals, which can come from natural/hatchery population and/or from family produced in hatchery. Animals can be infected (naturally or experimentally). DNA extraction can be done from the whole animal,</i>	Bacterial diversity and/or vibriome information will be obtained from the analysis of DNA extracted from <i>C gigas</i> collected in selected aquaculture sites and periods Contrasted (eg healthy and diseased) bivalve samples (<i>Crassostrea gigas</i>) were collected in different seasons before, during and after the occurrence of abnormal mortality episodes in Brest Bay, France. DNA from single animals was extracted from whole homogenate of the bivalve tissues using commercial kit with a protocol agreed by VIVALDI partner Samples were preliminary screened for the presence of <i>Vibrio aestuarianus</i> by real-Time PCR based methods (Webb et al, 2007; IFREMER, 2013)s

<i>tissue.</i>	
Protocols <i>Example: 16S ribosomal RNA gene sequencing by NGS</i> Please refer to the DMP table* for more examples	16S ribosomal RNA (V4 region) gene sequencing by NGS
Nature of the collected/generated data <i>Example: Raw dataset in .blc/.fastqc/.fasta formats for genomic information, and processed data set will be .vcf/.bed formats.</i> Please refer to the DMP table* for more examples	Raw dataset in .fastqc format
Coverage (if applicable) <i>Example: random genomic regions covered at 50 X</i> Please refer to the DMP table* for more examples	N/A
What are the prerequisites allowing to use the data as such? <i>Example: Any person able to use .fastqc file and .fasta file</i> Please refer to the DMP table* for more examples	Any person able to use .fastqc file
Sharing of main data	Saved and shared after publication
	<i>Please specify</i>
Archiving and preservation <i>Example: data will be stored on a hard drive + online back up and then will be released</i>	Hard drive and cloud service. We maintain at least 2 copies of the files in different locations (Trieste and Genova).

<i>on public database (Sinoe, Dryad) after publication.</i> Please refer to the DMP table* for more examples																																	
List, description and storage of associated data (metadata) <i>Examples: environmental data, mortality monitoring, genotyping...</i>	<i>Samples provided by CNRS, DNA extracted and amplicons libraries produced by UNIGE DNA sequencing performed by UNITS</i> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr style="background-color: #f4a460;"> <th>Date</th> <th>Code</th> <th>C. gigas (age)</th> <th>Mortality (%)</th> <th>OshV-1 (PCR results)</th> <th>V. aestuarianus (PCR results)</th> <th>Microbiome analysis (analysed samples)</th> <th>Vibriome analysis (analysed samples)</th> </tr> </thead> <tbody> <tr> <td colspan="8">Bay of Brest (France)</td> </tr> <tr> <td>10_07_2017</td> <td></td> <td>adult/juvenile</td> <td>mortality</td> <td>2+/12</td> <td>2+/12</td> <td>1 Va infect, 1 OshV-Va infect and 3 controls</td> <td></td> </tr> <tr> <td>05_10_2017</td> <td></td> <td>adult/juvenile</td> <td>no mortality</td> <td>3+/15</td> <td>1+/15</td> <td>2 OshV infect, 1 OshV-Va infect and 3 controls</td> <td></td> </tr> </tbody> </table>	Date	Code	C. gigas (age)	Mortality (%)	OshV-1 (PCR results)	V. aestuarianus (PCR results)	Microbiome analysis (analysed samples)	Vibriome analysis (analysed samples)	Bay of Brest (France)								10_07_2017		adult/juvenile	mortality	2+/12	2+/12	1 Va infect, 1 OshV-Va infect and 3 controls		05_10_2017		adult/juvenile	no mortality	3+/15	1+/15	2 OshV infect, 1 OshV-Va infect and 3 controls	
Date	Code	C. gigas (age)	Mortality (%)	OshV-1 (PCR results)	V. aestuarianus (PCR results)	Microbiome analysis (analysed samples)	Vibriome analysis (analysed samples)
