

Validation of a MALDI-TOF MS database for fast identification of *Vibrio* spp. potentially pathogenic in marine molluscs

Vivaldi Project

EAFP meeting, Porto, 9-12 September 2019

M. MOUSSA-POULY, M. A. TRAVERS, E. CAUVIN, B. THUILLIER, A. LE PIOUFFLE,
M. TREILLES, C. GARCIA

Objective of MALDI-TOF MS VibrioDatabase

Face to:

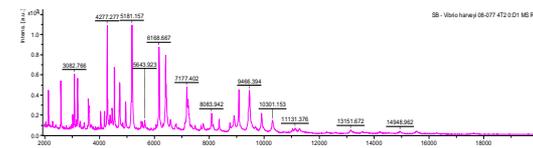

- Noticeable increase in **bacterial diseases** reports in marine molluscs
- Difficulties in rapid identification of bacteria species isolated during mortality events

Creation of *Vibrio* MALDI-TOF MS Database specific to marine molluscs

MALDI-TOF : Proteomic tool identification by rapid generation and comparison of bacteria mass spectra
Identification of *Vibrio* spp. in few seconds (important for monitoring programs)

The MALDI-TOF database created contains 109 reference spectra of *Vibrio* species
1 reference spectra = compilation of selected spectra obtained by three different labs (using of three different media)

Validation of MALDI-TOF Database

Validation MALDI-TOF VibrioDatabase protocol

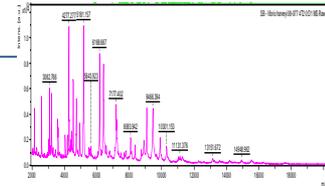

**BLIND TEST
OF 100
VIBRIO
STRAINS**

- ✓ Analysed by three French collaborators (three different media)
- ✓ Two protocol methods were tested **Direct transfer** and **protein extract**

**RAW
SPECTRA
ACQUISITION**

- ✓ 3 raw spectrum obtained / strain : **direct transfer**
- ✓ 3 raw spectra obtained / strain : **protein extract**

Validation MALDI-TOF VibrioDatabase protocol

✓ Database test with MBT Compass software

MALDI Biotyper Compass Explorer

Spectra of Strains tested with the created database

0 - 1,69 1,70 - 1,99 2 - 3

Ifremer

Results of Validation (1)

Direct transfer

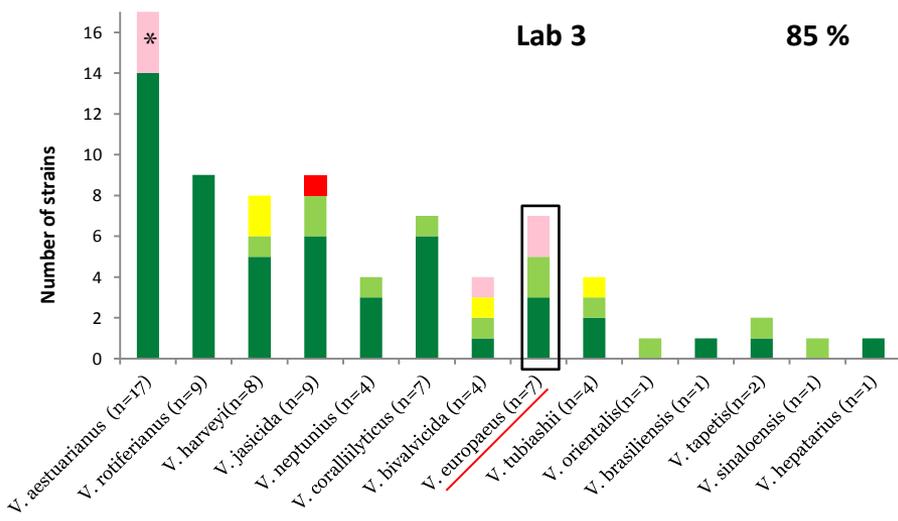

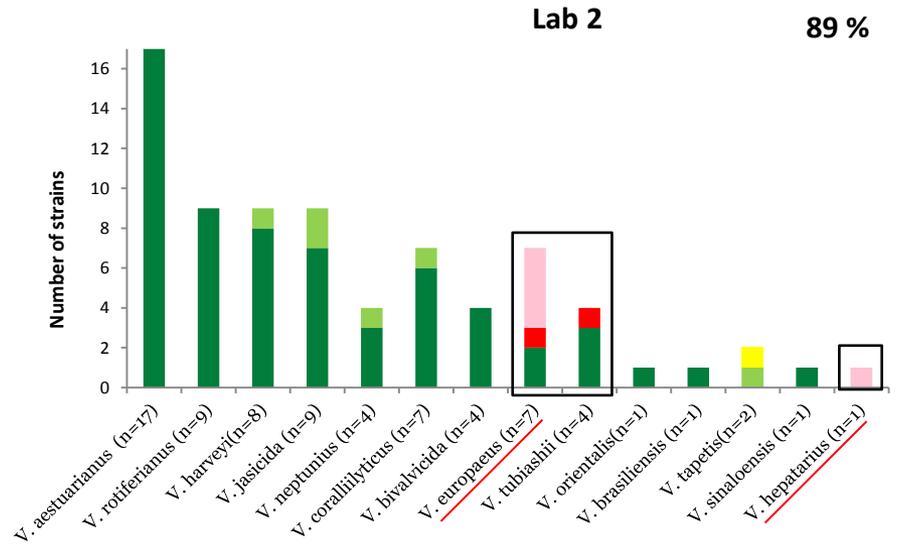

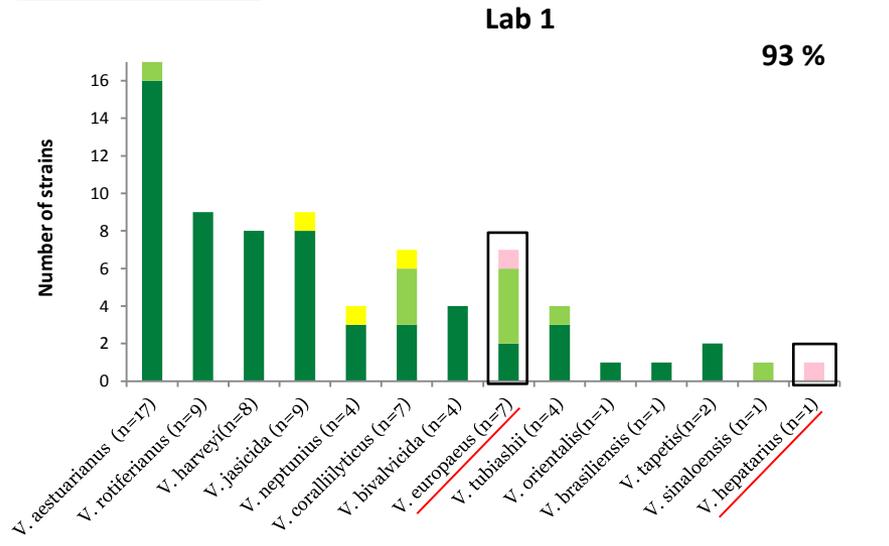

■ Different identification
■ Score value 0.000-1.699
■ Score value 1.700-1.999
■ Score value 2.000-2.299
■ Score value 2.300-3.000

* Experimental errors

- With direct transfer : majority of tested strains well-identified
- Lab 3 : lower score, probable due to experimental problem
- The mismatching occurred mainly with *V. europaeus* /*V. tubiashii* and *V. hepatarius*/*V. orientalis*

Results of Validation (2)

Protein extract

- Different identification
- Score value 0.000-1.699
- Score value 1.700-1.999
- Score value 2.000-2.299
- Score value 2.300-3.000
- * Experimental errors

➤ Protein extract and Direct transfer : almost identical results (difference with lab 3 due to experimental problem).

➤ The mismatching mainly occurred with *V. europaeus* / *V. tubiashii* and *V. hepatarius* / *V. orientalis*

Results of Validation (3)

- High matching score (>2,3) of :
 - *V. europaeus* with *V. tubiashii*
 - *V. hepatarius* with *V. orientalis*
- Species very close regarding MALDI-TOF biotyper Tree
- *V. europaeus* and *V. tubiashii* recently dissociated and were classified as the same species

Number of *V. europaeus*
identified as *V. tubiashii*

	DT	PE
Lab 1	4/7	1/7
Lab 2	4/7	4/7
Lab 3	0/7	2/7

Number of *V. tubiashii*
identified as *V. europaeus*

	DT	PE
Lab 1	1/4	0/4
Lab 2	1/4	0/4
Lab 3	0/4	0/4

Number of *V. hepatarius*
identified as *V. orientalis*

	DT	PE
Lab 1	0/1	1/1
Lab 2	1/1	1/1
Lab 3	1/1	0/1

Dendrogram on the basis of the MSP spectra (Maldi Biotyper)

Results of Validation (4)

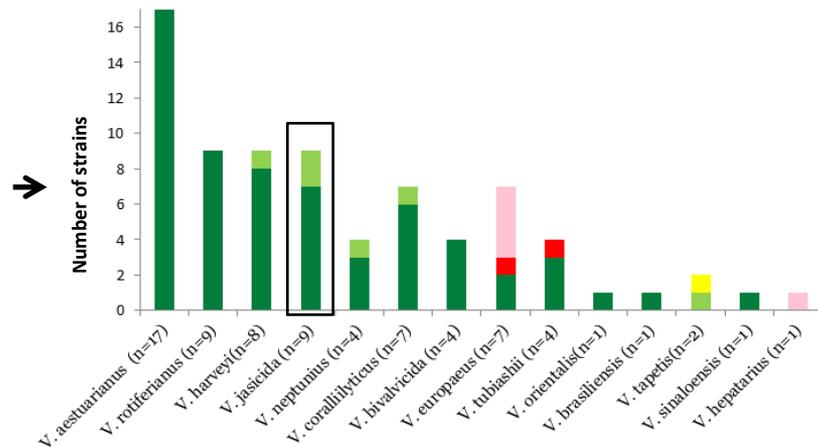

- Test with existing Databases containing *Vibrio* species : Biotyper (Bruker) and Erler (2015) :
- Same results as with VibrioDatabase for all strains excepted for *V. jasicida*

VibrioBase: A MALDI-TOF MS database for fast identification of *Vibrio* spp. that are potentially pathogenic in humans

René Erler^{1,2*}, Antje Wichels³, Ernst-August Heinemeyer⁴, Gerhard Hauk⁵, Martin Hippelein⁶, Nadja Torres Reyes⁶, Gunnar Gerdtz³

VibrioBase

(DT : 93%, 88%, 57% / PE : 93%, 89%, 85%)

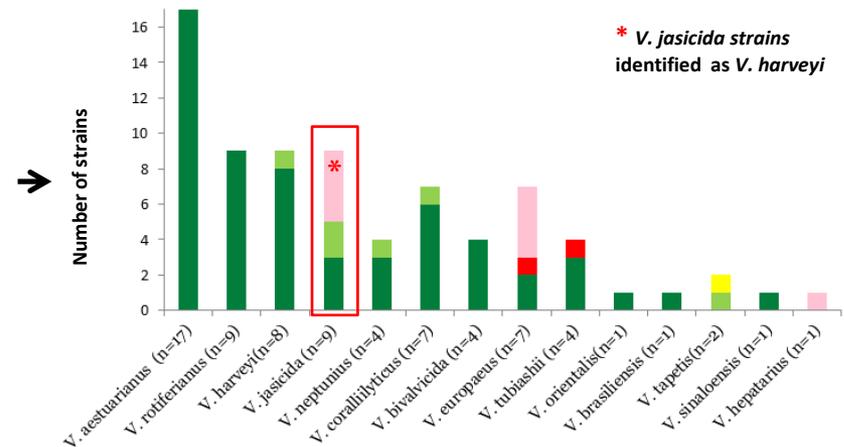

Number of strains of *V. jasicida* well-identified

	DT	PE
Lab 1	8/9	8/9
Lab 2	8/9	9/9
Lab 3	3/9	8/9

VibrioBase+Biotyper+Erler

(DT : 88%, 79%, 57% / PE : 93%, 85%, 84%)

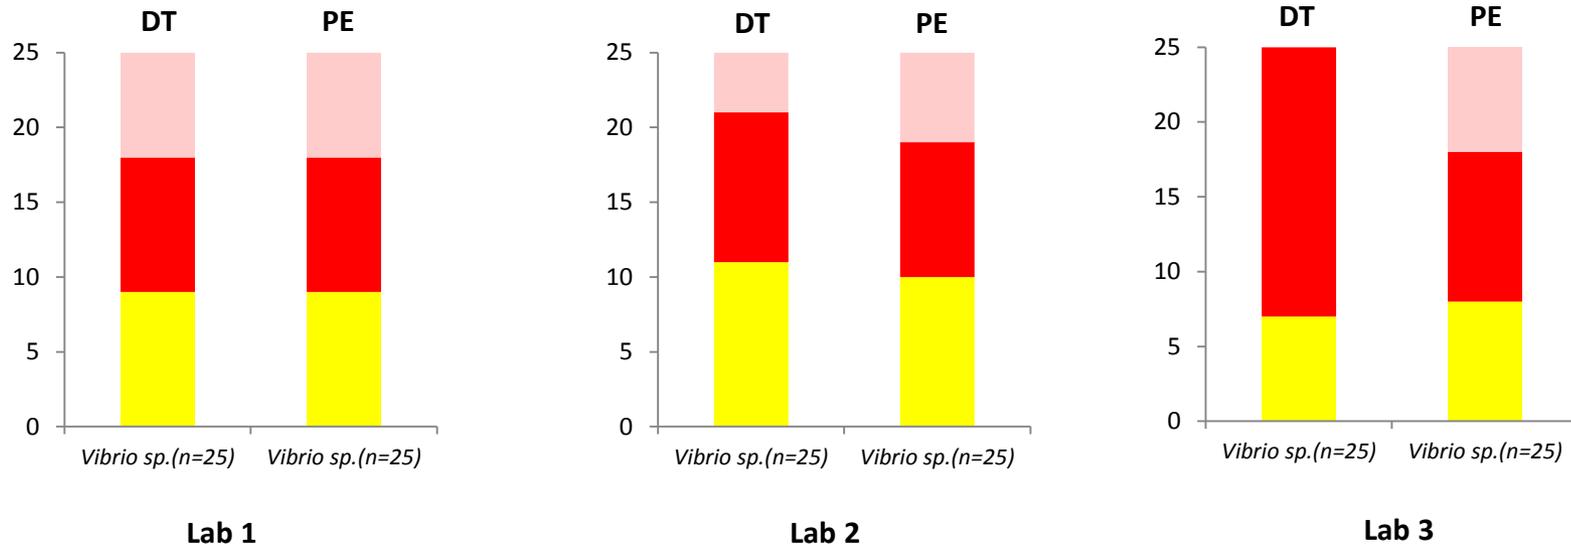

Number of strains of *V. jasicida* well identified

	DT	PE
Lab 1	3/9	8/9
Lab 2	1/9	5/9
Lab 3	3/9	7/9

- **VibrioBase + Biotyper + Erler Databases** : *V. jasicida* identified as *V. harveyi* VN 02940 AWIH at a high matching score.
- *V. harveyi* VN 02940 AWIH of Biotyper Database is not a type strain but maybe a *V. jasicida* strain.

Results of Validation – Test of the specificity of the MALDI-TOF Database (5)

➤ *Vibrio* sp. not present in the VibrioDatabase were tested :

➤ **All *Vibrio* species that are not present in the Database were not well-identified**

***Vibrio* species tested :** *V. alginolyticus* ; *V. anguillarum* ; *V. azureus* ; *V. barjanei* ; *V. campbelli* ; *V. cortegadensis* ; *V. galathae* ; *V. hyuagaensis* ; *V. mytili* ; *V. mediterranei* ; *V. natriegens* ; *V. nereis* ; *V. salilacus* ; *V. ostreicida* ; *V. owensii* ; *V. splendidus* ; *V. sagamiensis* ; *V. xuii*

Conclusion and perspectives

- Creation of MALDI-TOF Vibriobase containing 109 strains potentially pathogenic to marine molluscs
- Majority of *Vibrio* species well-identified with MALDI-TOF VibrioDatabase
- This VibrioDatabase is specific
- MALDI-TOF Database can be used as routine diagnostic for rapid marine identification :
 - ➔ Real progress compared to time- consuming classical methods to identify *Vibrio*
- Protein extract method provided better results but Direct transfer can be used for greater speed
